

STUDENT LESSON DATABASE

Christina Tsui

Assumptions:

- Lesson_Taken is the number of classes the student has attended.
- Lesson_Accomplished is the number of lessons that have been given.
- A LESSON does not occur if there is zero attendance by students.
- While LESSONS are priced by type, the price may change in the future.
- A STUDENT can have zero LESSONS taken, but still be stored in the database because their information may be stored before a LESSON has taken place.
- A Taken_ID(FK), will match the STUDENT_ID(PK), as it tracks the LESSONS the STUDENT takes.
- Billing information is acquired through SQL aggregation.
